

# ILLUM-A-VIEW

## The Hands-Free Solution to Your Dark Chamber Problem

Researchers have been working in the dark—straining to see inside a dimly lit vacuum chamber. You’ve tried handheld flashlights or integrated “goose-neck” lamps and have been blinded by the glare on the glass or have had your view blocked by the light source itself.

ANCORP developed the Illum-A-View—a lightweight ring fitted with bright natural white LEDs that shine directly into your chamber with minimal viewing obstruction—as a solution.

The Illum-A-View easily fits over existing viewports, allowing you to shine a light on your research.

## Features

- Slim design machined from lightweight aluminum & anodized for added durability
- Bright white LEDs shine directly into chamber, always stay cool to the touch, and have a lifespan of over 30,000 hours
- Mounts onto viewport securely at any angle using 3 small set screws
- 120VAC to 12VDC power supply with inline on/off switch plugs into standard AC outlet
- Available in standard viewport sizes: CF275 · CF450 · CF600 · CF800 · CF1000
